

# *Significant figures*

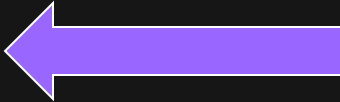

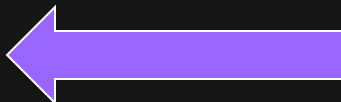

There are 2 kinds of numbers:

**Exact:** the amount of money in your account.  
Known with certainty. Anything *COUNTED*

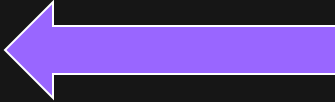

**Approximate:** weight, height—anything  
**MEASURED.** No measurement is perfect.

# *Recall*

A. Exact numbers are obtained by

1. using a measuring tool
2. counting 
3. definition 

B. Measured numbers are obtained by

1. using a measuring tool 
2. counting
3. definition

# *Practice*

Classify each of the following as an exact or a measured number.

1 yard = 3 feet

The diameter of a red blood cell is  $6 \times 10^{-4}$  cm.

There are 6 hats on the shelf.

Gold melts at  $1064^{\circ}\text{C}$ .

# *When to use Sig Figs*

When a measurement is recorded only those digits that are **dependable** are written down.

Every experimental measurement has a degree of uncertainty.

The volume,  $V$ , at right is certain in the 10's place,  $10\text{mL} < V < 20\text{mL}$

The 1's digit is also certain,  $17\text{mL} < V < 18\text{mL}$

A best guess is needed for the tenths place.

# *Another Example*

We can see the markings between 1.6-1.7cm

We can't see the markings between the .6-.7

We must guess between .6 & .7

We record 1.67 cm as our measurement

The last digit an 7 was our guess...stop there

# *Your Turn*

**Measured Numbers have error...you have to make that Guess!**

What is the length of the wooden stick?

- 1) 4.5 cm
- 2) 4.54 cm
- 3) 4.547 cm

# *Recorded Numbers*

Uncertain digit  
54.07 g      A mass between 54.06 g and 54.08 g ( $\pm 0.01$  g)

Uncertain digit  
54.071 38 g      A mass between 54.071 37 g and 54.071 39 g ( $\pm 0.000\ 01$  g)

Copyright © 2007 Pearson Prentice Hall, Inc.

All but one of the significant figures are known with certainty. The last sig. fig. is only to the best possible estimate.

To indicate the precision of a measurement, the value recorded should use all the digits known with certainty.

# *The Rules*

**RULE 1.** Zeros in the middle of a number are like any other digit; they are always significant.

Ex. 45.081 g has **five** significant figures.

**RULE 2.** Zeros at the beginning of a number are not significant; they act only to locate the decimal point.

Ex. 0.0537 cm has **three** significant figures,  
and **0.069 01 mL** has? **4**

## *The Rules cont.*

**RULE 3.** Zeros at the end of a number and *after* the decimal point are significant. It is assumed that these zeros would not be shown unless they were significant.

Ex. 527.700 m has **six** significant figures.

If the value were known to only four significant figures, we would write 527.7 m.

## *The Rules cont.*

**RULE 4.** Zeros at the end of a number and *before* an implied decimal point may or may not be significant. We cannot tell whether they are part of the measurement or whether they act only to locate the unwritten but implied decimal point.

Ex. 280 000km has 2 sig. figs.

# *How Many Sig Figs?*

a. 45.8736

b. 0.000239

c. 0.00023900

d. 48000.

e. 48000

f.  $3.982 \times 10^6$

g. 1.00040

# *Scientific Notation*

When ever you are unsure – convert to scientific notation

$$215. = 2.15 \times 10^2$$

Decimal point is moved two places to the left, so exponent is 2.

Copyright © 2007 Pearson Prentice Hall, Inc.

$$3.7962 \times 10^4 = 37,962$$

Positive exponent of 4, so decimal point is moved to the right four places.

Copyright © 2007 Pearson Prentice Hall, Inc.

$$1.56 \times 10^{-8} = 0.000\ 000\ 015\ 6$$

Negative exponent of  $-8$ , so decimal point is moved to the left eight places.

Copyright © 2007 Pearson Prentice Hall, Inc.

# *Adding and Subtracting*

Rule: When adding or subtracting measured numbers, the answer can have no more places after the decimal than the **LEAST** of the measured numbers.

# *Practice*

$$5.45\text{cm} + 2.3\text{cm} = 7.75\text{cm},$$

$$\text{Round off to } = 7.8\text{cm}$$

**You try:**

$$7.432\text{cm} + 2\text{cm} =$$

$$9.432 \text{ round to } \rightarrow 9\text{cm}$$

# *Multiplications and Division*

Rule: When multiplying or dividing, the result can have no more significant figures than the **least** reliable measurement.

# *Practice*

$$56.78 \text{ cm} \times 2.45 \text{ cm} = 139.111 \text{ cm}^2$$

Round to  $\rightarrow 139 \text{ cm}^2$

$$75.8 \text{ cm} \times 9.6 \text{ cm} = ?$$

# *Bell Work*

## *28-Aug-2015 Pre - AP*

A man in a restaurant asked a waiter for a juice glass, a dinner plate, water, a match, and a lemon wedge. The man poured water on the plate to cover it.

"If you can get the water on the plate into this glass without touching or moving this plate, I will give you \$100," the man said. "You can use the match and lemon to do this."

A few minutes later, the waiter walked away with \$100 in his pocket. ***How did the waiter get the water into the glass?***

# *Objective*

You will be able to determine the density of a metal after finding its mass and volume.

You will learn a fast method for finding volume.

# Pre Lab

**Use as many  
piece of paper  
as you need, try  
not to write on  
both side.**

**Analysis and conclusions should be recorded at the end of the pre lab after the lab**

# Title

Purpose/ Objective: \_\_\_\_\_

Safety: \_\_\_\_\_

Pre lab Calculations: \_\_\_\_\_

Procedures

↓

Data Table:

Observations

↓

Name \_\_\_\_\_

Period \_\_\_\_\_

Date \_\_\_\_\_

# *Reading a Graduated Cylinder*

**What do you think is the volume of the solution in your graduated cylinder?**

# *Density Lab*

*There are **eight (8)** different metals, **A-H**,  
you will work each and rotate through  
the lab*

**Each metal type needs a** minimum of three (3)  
**different samplings of volume and mass.**

Dry metals before weighing, all sphere metals  
use weigh boats

# *Density Lab*

**Safety**: **Do Not** touch the lead, Pb, with your fingers or hand. **No Toces El Plomo**

When using the **Pb** and "G" use 15 balls at a time.

So 15, 30, 45, \_\_\_\_\_ etc. when measuring

**Follow directions!**

When finished, record data on board for class to copy down for graphs.

# *Before you leave...*

**What laboratory tool could you use to find the volume of a metal nut?**

**How would you carry out the measurement?**

**What should you be sure to do to insure the volume is measured correctly?**

When finished record data on board for class to copy down for graphs.

Email graph to: [william.golden@fwusd.org](mailto:william.golden@fwusd.org)

Subject: P.X.LastName.FirstName.Density

# *Bell work*

## *31-Aug-2015*

If a clay brick measures 20.0cm x 10.0cm x 10cm,  
what is the volume of the brick, in mm<sup>3</sup>?

EQ: Suppose there are three parts to learning in school; student, teacher, and content/material. What is your role as a student including responsibilities and expectations

Agenda:

Finish density lab and record all data as a class.

# *Recap*

What did we do in the lab Friday day?

What two (2) measurements did we make?

**Intensive property:** Independent of the quantity or amount (Melting point, density, Molar Mass, etc.)

**Extensive property:** Depends on the amount. (Mass, volume, temperature, measurements)

# *Actual Density Values for percent Error*

## **1. Person from each group:**

**Please come up to board and enter any  
*one* of your values you measured for  
each sample**

## **2. Take a picture or look up data on class website in power point section**

# *Bell work*

## *1-Sept-2015*

Log on to a computer and go to the class website.

EQ: Suppose there are three parts to learning in school; student, teacher, and content/material. What is your role as a student including responsibilities and expectations

Agenda:

Use data from density lab to develop a series of line graphs on excel which show density as slope

# *Actual Density Values for percent Error*

A: St. Fe 8.05g/cm<sup>3</sup> E: Granit 2.7 g/cm<sup>3</sup>

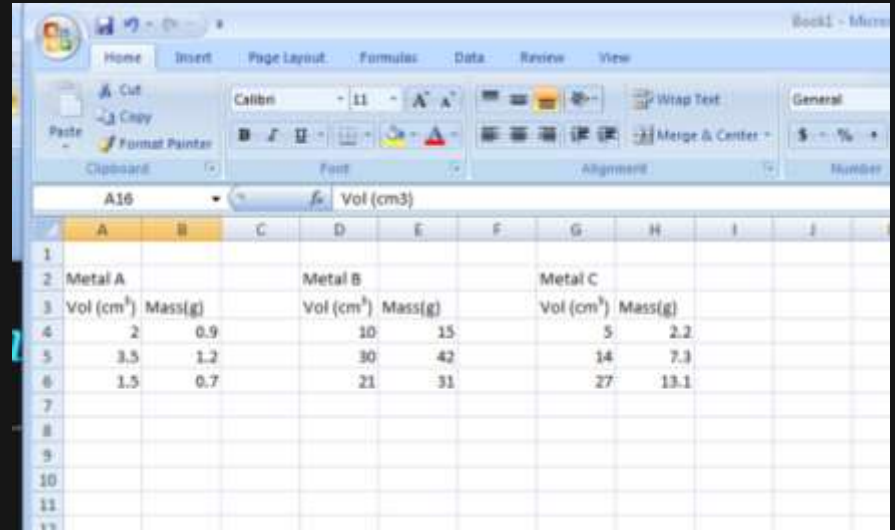

B: Al 2.7g/cm<sup>3</sup> F: Obsidian (SiO<sub>2</sub>) 2.6 g/cm<sup>3</sup>

C: Ni 8.90g/cm<sup>3</sup> G: 8.96g/cm<sup>3</sup>

D: FeS<sub>2</sub> 5.02g/cm<sup>3</sup> H: Pb 11.34g/cm<sup>3</sup>

# Making your Graph

1. Enter your data in the spread sheet.

A screenshot of the Microsoft Excel interface. The 'Home' tab is selected. The active cell is A16, containing the formula '=Vol (cm3)'. The spreadsheet contains data for three metals: Metal A, Metal B, and Metal C. Each metal has two columns: Vol (cm³) and Mass(g). The data is as follows:

	Metal A		Metal B		Metal C	
	Vol (cm³)	Mass(g)	Vol (cm³)	Mass(g)	Vol (cm³)	Mass(g)
2						
3						
4	2	0.9	10	15	5	2.2
5	3.5	1.2	30	42	14	7.3
6	1.5	0.7	21	31	27	13.1

2. Go to the "Insert" tab and select "Scatter"

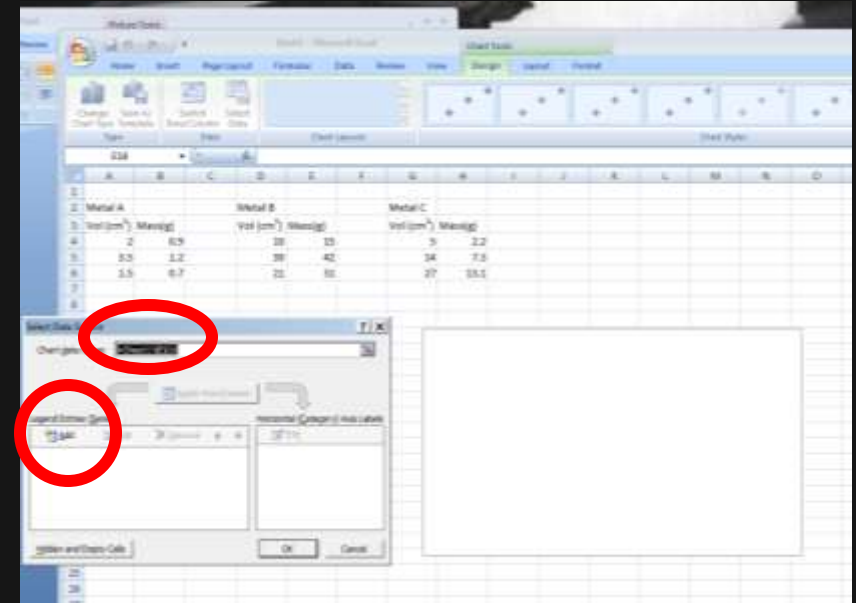

# Graph Cont. 2

3. Select "Design" then "Switch Data"

4. Clear Chart Range, and click "Add"

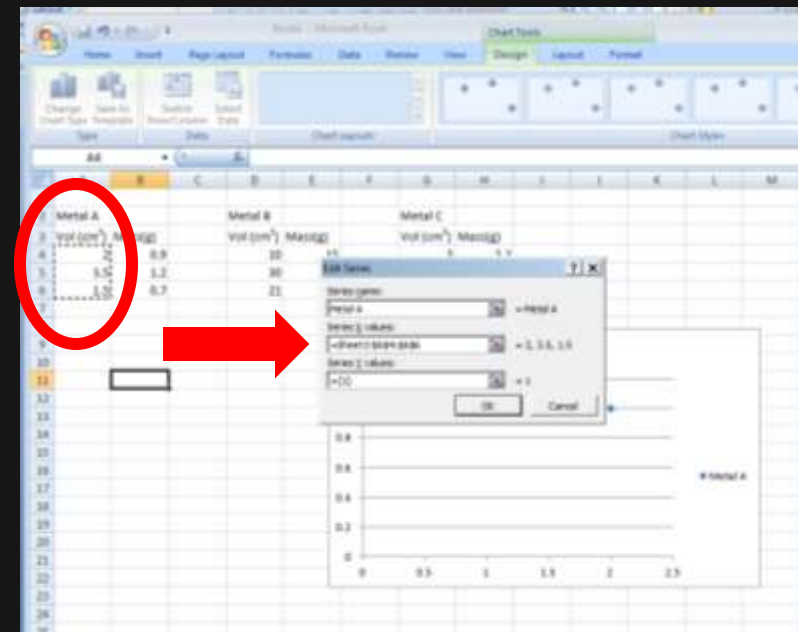

# Graph Cont.

5. Type in Series name

6. Click in "Series X values" and then highlight the x-axis data for metal A

# Graph Cont. 4

5. Click in "Series Y values" and, delete " $=\{1\}$ " then high light the y-axis data for metal A

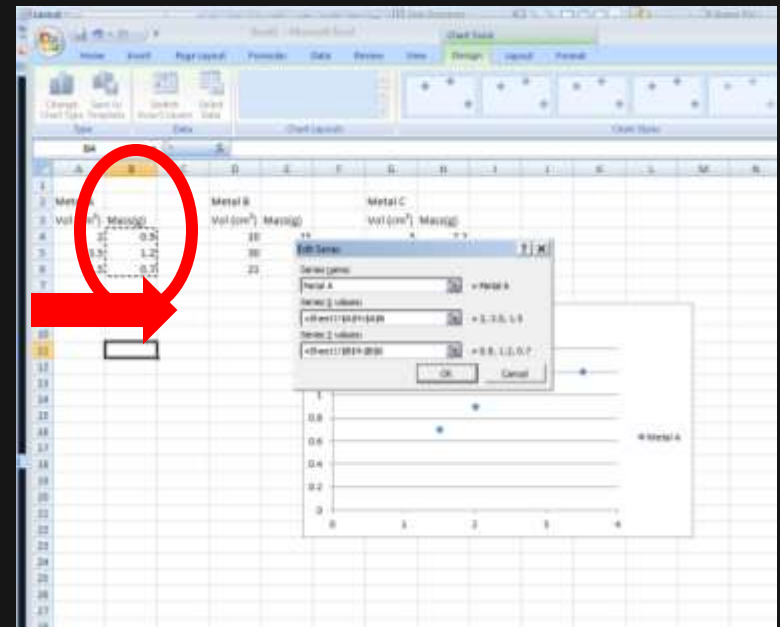

6. Repeat steps 4-6 for each metal

# Graph Cont. 5

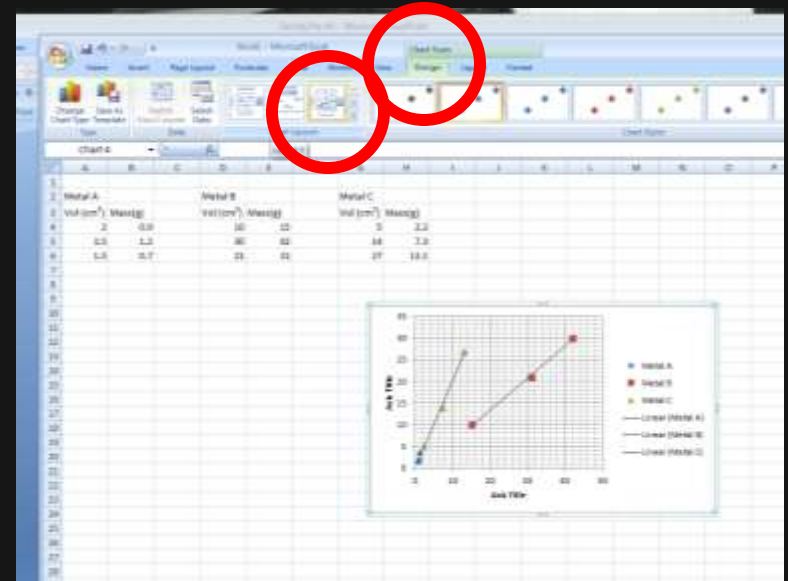

5. Click in "Series Y values" and then highlight the y-axis data for metal A

6. Repeat steps 4-6 for each metal

# Graph Cont. 6

7. Click on chart then "design", and pick "layout 3"

8. Fill in Axis titles and Chart title, you can calculate slope manually Or using excel " $=\text{SLOPE}()$ " formula

# *Email Your Graphing*

Save as: PX.Lastname.Firstname.Density

Email graph to: [william.golden@fwusd.org](mailto:william.golden@fwusd.org)

Subject: PX.Lastname.Firstname.Density

Must be in exact form or No credit.

Each person needs to send graphs

Due by 4:00pm Tuesday 8-Sept-2015

# *Density*

**Density compares the mass of an object to its volume**

$$D = \frac{\text{mass}}{\text{volume}} = \frac{\text{g}}{\text{ml}} = \frac{\text{g}}{\text{cm}^3}$$

**Note: 1 mL = 1 cm<sup>3</sup>**

# *Bell Work*

## *2-Sept-2015*

What is the mass (g and lb) of a bar of lead below with dimensions of base 1 50. mm, base 2 28.mm with a height of 45.mm, a width of 200.mm. The density of lead can be found in the back of your text book.

$$Vol_{trap} = \frac{h(b_1 + b_2)}{2} \times w$$

EQ: Suppose there are three parts to learning in school; student, teacher, and content/material. What is your role as a student including responsibilities and expectations

## *Objective*

You will complete a short reading and then compose and answer to a prompted questions

# *Writing #1 Page set up*

A

Name  
Period

**Using information from the article, previous learning, and the lab, write a few paragraphs persuading the US government to use the metric system by describing 3 or more advantages of the metric system over the standard system.**

# *Practice*

**Osmium is a very dense metal. What is its density in  $\text{g}/\text{cm}^3$  if 50.00 g of the metal occupies a volume of  $2.22\text{cm}^3$ ?**

**1)  $2.25 \text{ g}/\text{cm}^3$**

**2)  $22.5 \text{ g}/\text{cm}^3$**

**3)  $111 \text{ g}/\text{cm}^3$**

## *Solution*

**2) Placing the mass and volume of the osmium metal into the density setup, we obtain**

$$D = \frac{\text{mass}}{\text{volume}} \rightarrow \frac{50.00 \text{ g}}{2.22 \text{ cm}^3} \rightarrow$$

$$\rightarrow 22.522522 \text{ g/cm}^3 \rightarrow 22.5 \text{ g/cm}^3$$

# *Home Work*

## *2-Sept-2015*

Complete on same sheet as previous book  
work,

Problem: p43-45

#29, 33, 37, 38, 39

# *Closure*

What is the percent error in the results of the following measurement: Outside air temp was found to be 29.3°C but was actually 30.04°C.

Hint:  $\frac{| \text{Actual value} - \text{your value} |}{\text{Actual value}} \times 100\%$

# *“Density Practice Problems”*

Complete ALL Work on a separate sheet of paper.  
The provided example should be followed. You  
**WILL NOT RECEIVE** credit if dimensional  
analysis is not used 😊

# *Bellwork*

## *3-Sept-2015*

What is the density (g/mL) of a solution with a volume of  $3.1\text{E-}4\text{ m}^3$  and a mass of 340.0g?

$$\text{Density} = m/v$$

**EQ:** Suppose there are three parts to learning in school; student, teacher, and content/material. What is your role as a student including responsibilities and expectations

## *Objective*

You will be able to use density as a conversion factor between mass and volume.

You will know how to correctly save, attach, label, and email you density of metals graph.

# *Density*

## **Objective**

Students will be able to make an excel graph of their lab data

Students will use excel graph to estimate density

# *Volume Displacement*

**A solid displaces a matching volume of water when the solid is placed in water.**

# *Practice*

What is the density ( $\text{g}/\text{cm}^3$ ) of 48 g of a metal if the metal raises the level of water in a graduated cylinder from 25 mL to 33 mL? **A)  $0.2 \text{ g}/\text{cm}^3$**     **B)  $6 \text{ g}/\text{cm}^3$**     **C)  $252 \text{ g}/\text{cm}^3$**

# *Solution*

**B) 6 g/cm<sup>3</sup>**

**Volume (mL) of water displaced**

$$= 33 \text{ mL} - 25 \text{ mL} = 8 \text{ mL}$$

**Volume of metal (cm<sup>3</sup>)**

$$= 8 \text{ mL} \times \frac{1 \text{ cm}^3}{1 \text{ mL}} = 8 \text{ cm}^3$$

**Density of metal =**

$$\frac{\text{mass}}{\text{volume}} = \frac{48 \text{ g}}{8 \text{ cm}^3} = 6 \text{ g/cm}^3$$

# Practice

Which diagram represents the liquid layers in the cylinder?

(K) Karo syrup (1.4 g/mL), (V) vegetable oil (0.91 g/mL,) (W) water (1.0 g/mL)

1)

2)

3)

# *Solution*

1)

**(V) vegetable oil (0.91 g/mL),**

**(W) water (1.0 g/mL)**

**(K) Karo syrup (1.4 g/mL),**

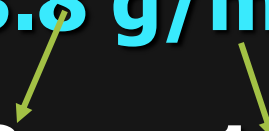

# *Density as Conversion Factors*

**A substance has a density of 3.8 g/mL.**

**Density = 3.8 g/mL**

**Equality 3.8 g = 1 mL**

**Conversion factors.**

$$\frac{\underline{3.8 \text{ g}}}{1 \text{ mL}} \quad \text{and} \quad \frac{\underline{1 \text{ mL}}}{3.8 \text{ g}}$$

# *Density Connections*

**L**

**mL (cm<sup>3</sup>)**

# *Home Work*

## *3-Sept-2015*

Problem: p43-45

#51-53, 56, 57

# Practice

The density of octane, a component of gasoline, is  $0.702 \text{ g/mL}$ . What is the mass of  $875 \text{ mL}$  of octane?

A)  $0.614 \text{ g}$

B)  $614 \text{ g}$

C)  $1.25 \text{ g}$

# *Solution*

**B) 614 g**

**Equalities:** 1 mL = 0.702 g

**Setup:**

$$875 \text{ mL} \times \frac{0.702 \text{ g}}{1 \text{ mL}} = 614 \text{ g}$$

*density  
factor*

# *Practice*

**I threw a plastic ball in the pool for my dog to fetch. The mass of the ball was 125 grams. What is the volume in L if the ball has a density of 0.500 g/mL?**

- 1) 250L      2) 2.50L    3) 0.250L**

# *Solution*

3)

**Unit Plan: g → mL → L**

$$125 \text{ g} \times \frac{1 \text{ mL}}{0.500 \text{ g}} \times \frac{1 \text{ L}}{1000 \text{ mL}} = 0.25 \text{ L}$$

# *Practice*

If blood has a density of  $1.05 \text{ g/mL}$ , how many **liters** of blood are donated if  $575 \text{ g}$  of blood are given?

A)  $0.548 \text{ L}$

B)  $1.25 \text{ L}$

C)  $1.83 \text{ L}$

# *Solution*

A)

Unit Plan: g  $\longrightarrow$  mL  $\longrightarrow$  L

$$575 \text{ g} \times \frac{1 \text{ mL}}{1.05 \text{ g}} \times \frac{1 \text{ L}}{1000 \text{ mL}} = 0.548 \text{ L}$$

*Before you leave...*

What is the most challenging aspect of solving density problems for me?

Where can I get help with them?

*Bell Work*  
*8-Sept-2015*  
*New Bell Work #3*

**A: If an empty 125mL glass flask weighs 75g and when filled with water weighs 200g, what is the mass of the water?**

**B: What is the density of the water?**

# *Density*

## **Objective**

Apply dimensional analysis to density based problems.

# *Turn In* *8Sept2015*

Bell Work #2

Density Practice Problems

ex. *Hydrophilic, hydroscopic, hydrogen*

*9-Sept-2015*

If Al has a density of  $2.70 \text{ g/cm}^3$  and a bolt made of Al has a volume of  $12.5 \text{ mm}^3$ , what would the mass of the bolt be, in grams?

What about box of 1,000 bolts in kg?

EQ: What value does *my* education  
have in *my* future?

Concept of Density

Demo's

Word Problems

# *Density Vocabulary*

Weight: is a measure of the gravitational force on an object.

Volume is the amount of space an object occupies

Mass is the amount of matter which occupies a given space.

# Density, a Visual Explanation

100g popcorn kernels      100g popped popcorn

*a. Which bag has a greater volume of popcorn?*

*The popped kernels have a larger volume than the unpopped kernels.*

*b. Which type of popcorn is more dense?*

*The unpopped kernels.*

*c. Which bag has a greater mass?*

*Both bags have the same mass.*

*d. Which bag weighs the most?*

*Both bags weigh the same.*

# *Density, a Visual Explanation cont.*

**Using the following three words; density, mass, and volume, describe why the bag of kernels is more dense then the popped bag.**

**Complete sentences, correct use of words is necessary.**

A flask that weighs 200.5g is filled with 125mL of compound X. The weight of the flask and compound X is found to be 410.5g. From this information, calculate the density of compound X.

# *Graphing*

**A student obtained the following data in the lab:**

<b>Mass (g)</b>	<b>Vol. (cm<sup>3</sup>)</b>
0.5	0.12
4	0.97
1.5	0.36
2.5	0.61
2.75	0.67

**Graph the data and plot a best fit line.**

**What is the slope of the line?**

**What does that slope tell us?**

Mass (g)	Vol. (cm <sup>3</sup> )
0.5	0.12
4	0.97
1.5	0.36
2.5	0.61
2.75	0.67

# *Practice*

**A cup of gold colored metal beads was measured to have a mass 425 grams. By water displacement, the volume of the beads was calculated to be 48.0 cm<sup>3</sup>. Given the following densities, identify the metal.**

**Gold: 19.3 g/ cm<sup>3</sup>**

**Copper: 8.86 g/ cm<sup>3</sup>**

**Bronze: 9.87 g/ cm<sup>3</sup>**

# *Solution*

$$\frac{425\text{g}}{48\text{ cm}^3} = 8.86\text{g/cm}^3$$

## Copper

# *Step by Step*

**After crossing a bridge in your car you come up to a massive concrete block obstructing your view, if the block has a volume of  $15\text{m}^3$  and a mass of 4,500 kg. What is its density in g/L?**

# Step by Step

After crossing a bridge in your car you come up to a massive concrete block obstructing your view, if the block has a volume of  $15\text{m}^3$  and a mass of  $4\,500\text{ kg}$ . What is its density in  $\text{g/L}$ ?

$$\frac{4\,500\text{ kg}}{15\text{ m}^3} \times \frac{1\text{ m}^3}{1\,000\text{ dm}^3} \times \frac{1\text{ dm}^3}{1\text{ L}} \times \frac{1\,000\text{ g}}{1\text{ kg}} = 300\text{ g/L}$$

# *Learning Check*

**A group of students collected 125 empty aluminum cans to take to the recycling center. If 21 cans make 454 grams of aluminum, how many liters of aluminum ( $D=2.70 \text{ g/cm}^3$ ) are obtained from the cans?**

**A) 1.0 L   B) 2.0 L   C) 4.0 L**

# *Solution*

**A) 1.0 L**

$$125 \text{ cans} \times \frac{454 \text{ g}}{21 \text{ cans}} \times \frac{1 \text{ cm}^3}{2.70 \text{ g}} \times \frac{1 \text{ mL}}{1 \text{ cm}^3} \times \frac{1 \text{ L}}{1000 \text{ mL}} =$$

**B=====)**

**1.0 L**

# *Partner Practice*

**You have 3 metal samples. Which one will displace the greatest volume of water?**

**1**

25 g Al  
2.70 g/mL

**2**

45 g of gold  
19.3 g/mL

**3**

75 g of Lead  
11.3 g/mL

**Discuss your choice with your partner.**

# *Solution*

**1)**  $25 \text{ g Al} \times \frac{1 \text{ mL}}{2.70 \text{ g}} = 9.2 \text{ mL}$

$$\frac{25 \text{ g Al}}{2.70 \text{ g/mL}}$$

## *More Practice*

Find the mass of a **50.0 ml** quantity of water if the density of water is **1.00 g/ml**.

The density of air is **1.3 g/L**. How many liters of air weight **2 000 kg**.

The density of Ethanoic Acetic Acid is **1.05g/cm<sup>3</sup>**. What is the mass in kilograms of a volume of **5L**?

# *More Practice*

**Lithium, a metal found in high end batteries, has a density of  $0.53 \text{ g/cm}^3$ . Mr. Osakie of Sony bought a shipping crate full of Li from Clayton Valley, USA. It was completely laden with Li and had dimensions of  $1.5\text{m} \times 2.5\text{m} \times 3\text{m}$ . What was the mass of the Li in Kg?**

Figure 1

# *Density and Temperature*

## **On your “Density Lab”**

We will look at the movement of a dye through water and different temperatures and try to extrapolate the relationship to density.

Record time it takes dye to move vs. temp to try to draw the relationship between  $\rho$  vs.  $^{\circ}\text{C}$

What other concept is demonstrated in the experiment?

# *Density vs. Temp $H_2O$*

## *Explorations*

Purpose: Rationalize and investigate how density and temperature are related.

1. Devise a way to measure the density, mass (g) per volume (mL), of each of the samples of water.
2. Record measurements in a data table *you* design.

# *Density Column*

We will add the following liquids to a graduated cylinder to see how they separate themselves out:

Fuel

Cooking oil

Water

Soap

Corn Syrup

Honey

# *Air and Mass*

Given the following how  
could you find the  
density of air?

Balloon

Tub of water

0.00g scale

1 000mL graduated  
cylinder

# *Study Tips*

Small groups,

Go through notes and...

Identify topics/ themes from HW & Lectures

Repeated practice questions

Lab concepts/ topics and post lab questions

# *Test Taking Tips*

Eat Breakfast!

Relax

Read over the entire test

Identify problems you know how to do

Identify problems that may take extra time.
